Float Clear

Guardian float glass is a high quality glass available in countless sizes and packaging options, created to meet diverse needs.

Guardian UltraClear™

The brilliant, crystal-like transparency of Guardian UltraClear low-iron glass makes it an obvious choice when colour neutrality counts.

Mirror

Mirror is a high-quality product that applies a high-luster mirror to the surface of Guardian's top-quality float glass, resulting in a product that is both brilliant and durable.

Guardian Inspiration®

The optical properties of Guardian Inspiration enable the best compromise between non-glare and quality image perception. Superior haze and clarity values offer the best color definition and image resolution.

Guardian Brilliance™

High-performance anti-reflective glass begins with stringently specified and carefully tested float glass. A multilayer anti-reflective coating is applied on both surfaces—achieving dramatic reduction in reflectance and optimal conditions for viewing and protecting prized artwork when maximum clarity counts.

Paintings, photographs, drawings and other works become more vivid when presented with Brilliance double-sided anti-reflective glass, which helps them stay that way.
